

# Year 7 Knowledge Organiser: Manipulating Data - Using a Spreadsheet

## Creating a Formula:

The steps to creating a Formula:

1. Start with =
2. Select your **first cell reference** (B5)
3. Add the correct mathematical symbol (+, -, \*, /)
4. Select the **final cell reference**. (B6)
5. Press **enter**

E.G. =B5+B6

## Mathematical Symbols:

- + Addition
- Subtraction
- \* Multiplication
- / Division

## The structure of a Spreadsheet:

**The structure of a spreadsheet**

ROWS (Numbers)

Columns (Letters)

The WORKSHEET

TEXT Label

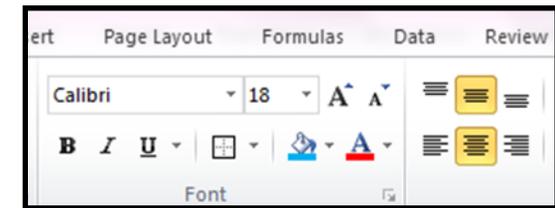

NUMERICAL Data

Each CELL has a UNIQUE CELL REFERENCE

Column = Letter B  
Row = Number 9

RESULTS			
Name	Paper 1 (out of 40)	Paper 2 (o of 40)	Total
Laura Abbott	47	21	
Daniel Barrett	32	20	
Paul Corris	45	34	
Peter Edwards	56	30	
Jessica Darwin	34	25	

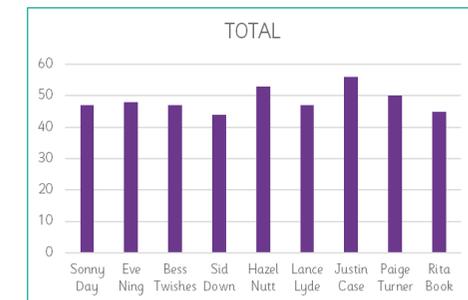

## Formatting a Spreadsheet:

The following can be changed: Font style, borders, font size, cell colour and font colour using the tool bar above.

## Creating a Graph:

A graph can be defined as a pictorial representation or a diagram that represents data or values in an organized manner.

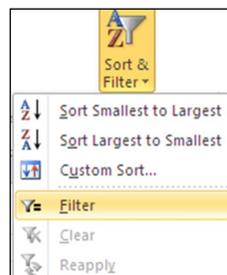

To create a graph you need to complete the following steps:

1. **Highlight** the required information.
2. Select the option **Insert**.
3. Select the **desired graph style**.
4. Add an appropriate graph **title**
5. Add appropriate **Axis titles**

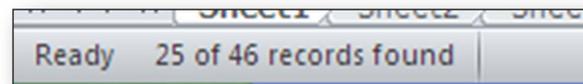

## Sorting and Filtering Data:

**Sorting Data**, is when you change the order of the data you have been presented

**Filtering Data**, is when only the selected data is shown (e.g. Female)

When data has been filtered the bottom of the screen will show you how many records remain
